

## Download and Install Mozilla FireFox

WeBsis Lumens Student Information System is designed to work best with Mozilla Firefox. The user will not have access to all applications if they use Internet Explorer or some other Internet browser.

1. Using your Internet Browser type in the following URL:  
<http://www.mozilla.com/en-US/firefox/?from=getfirefox>
2. Click on the green box “Download Firefox – Free”

3. If the next screen does not appear, turn off your pop-up blocker under “tools” and click on the download icon again. Another option is to click the “link” on the bottom right corner of the screen to proceed to download.
4. If you do see the “File Download – Security Warning” pop-up window you can select “run” and the download process will start. If you would like to install at a later time, select “save” and change the location to “desktop”. You can then double-click the icon on your desktop and install the application at a later time.

5. Once the file is downloaded, select “run” to start the install. After you start the installation process you can select the default settings by selecting “next” on each screen. When the installation is complete you can select “finish” and a Mozilla Firefox shortcut will appear on your desktop.

6. To finish configuration of Mozilla firefox, double-click on the icon on your desktop and answer a few questions and then save your configuration. Once again you can proceed by accepting the default settings during configuration.

7. You have now installed Mozilla Firefox on your computer.
